

CUMBERLAND BUILDING SOCIETY CHOOSES VALIDSOFT TO ENHANCE INTERNET BANKING SECURITY

'VALid®' to provide Out-of-Band multi-factor authentication and transaction verification

LONDON, UNITED KINGDOM, 23 June, 2010: ValidSoft (www.validsoft.com), the global supplier of authentication and transaction verification solutions and a subsidiary of Amsterdam-based Elephant Talk Communications Inc. (OTCBB: ETAK.OB; www.elephanttalk.com) today announced an agreement with Cumberland Building Society (www.cumberland.co.uk), the 15th largest building society in the UK with assets exceeding £1.5billion, to incorporate ValidSoft's VALid® solution technology into a new secure transaction service. Cumberland Building Society is a mutual organisation owned by its savers, borrowers and current accounts holders and follows a similar model to community banks in the US.

VALid® provides two or three factor authentication, with fully configurable Out-of-Band (OOB) behaviour, ranging from simple call acknowledgement all the way through to conversational voice verification. VALid® also supports landline phones, mobile phones and PDAs with communication via real-time voice telephony and/or SMS. Because VALid is a zero client-footprint solution there is nothing to provision, download, deploy or support.

According to Gary Richardson, assistant General Manager of Information Technology at Cumberland, "This move follows a successful two month trial period, starting 1st May. Originally offered to 250 Cumberland internet banking customers, feedback following the VALid® trial has been quite positive because of the new secure transaction service. Although we've never suffered a security breach at Cumberland, we feel it's vital that we continually develop and improve our security and authentication solutions. ValidSoft's VALid® solution has proven itself to be an advanced secure authentication and verification transaction service. Prior to deployment of VALid® solution our internet banking portal was accessed using a simple log-in and password. We wanted to ensure that any system we chose would offer the same level of usability to our customers. ValidSoft's VALid® solution fulfilled all of our expectations."

Richardson also commented that Cumberland had evaluated other technology solutions: "We looked at various solutions, including ones based on tokens and SMS, but we felt that none really competed with VALid® in terms of ease of use and, most importantly, security. One of the positive aspects to VALid® is that it is able to prevent all the latest malware attacks including 'Man in the Middle' and 'Man in the Browser'. This was something other technology solutions were unable to achieve."

Patrick Carroll, CEO of ValidSoft, stated: "Cumberland Building Society is clearly at the forefront of innovation in terms of concern about online security and consumer safety. Cumberland Building Society understands the benefits that telecommunications based strong authentication and transaction verification can provide, both for their organisation and their valued customers. The commitment ValidSoft has to innovation, customer security and safety when transacting online, and customer service were ultimately deciding factors for Cumberland."

##

About ValidSoft
